

## WHAT IS FUTRIX WEB?

Futrix Web is the simple to use interface that allows people to explore data and answer their questions at the touch of a button. Through Futrix Web your key people can navigate, explore and analyse data, giving them the information they require to make actionable decisions.

### KEY BENEFITS

**Self-Service Reporting.** Get instant access to the information you need, without understanding the structure of underlying data or specialist programming skills. Relieving IT of an ad hoc reporting workload, Futrix Web puts the right information, in the hands of the right people, at the right time.

**Drill Anywhere.** The unique 'drill-anywhere' capability frees you from pre-defined dimension hierarchies, allowing you to quickly navigate up, down and across your data. Meaning you can instantly home in on the information that you're interested in.

**Zero-footprint software.** Futrix Web is a zero footprint web based application that is quick and straight-forward to deploy. Delivered to your desktop via a browser, Futrix Web is highly available, easy to manage and familiar to use.

**Diverse information sources.** Access a wide range of data, from a huge variety of sources via just one interface. Regardless of the underlying database, Futrix Web delivers the same functionality.

**Up to date information.** By tapping into centrally managed data, users see only consistent, accurate and up to date information. Saved report templates access and present the latest data, so your business is acting on the most current information.

**Visual Indicators.** Traffic lighting is used to highlight areas of interest, allowing users to identify at a glance which areas may need addressing. Various charts and graphs can be instantly created to give a graphical representation of the data. Simple to create and easy to modify users can even drill down and interrogate areas of interest from the graphical view.

**Distributing reports.** Users can choose to print reports from the browser; save them as personal, workgroup or globally accessible report templates; or export them into a number of other formats including CSV and PDF. In combination with Futrix Static Publisher, individual reports or entire groups of reports can be used to generate static web content accessible via a URL. Futrix Web enables key personnel to easily transfer information to hard copy, circulate reporting templates and share their findings.

### TECHNICAL SPECIFICATIONS

The Futrix Core Technologies that deliver the power to the browser are built with a mix of open standards based Java technologies and SAS®9 technologies, helping to simplify server side deployment.
